Tons of annoying errors, but still helpful for review

By Pioneermtb

This book covers most of the material you will need to know to get an 800 on the SAT Physics. However, it is completely full of mistakes. Large errors, like saying that a convex lens is a diverging lens! These errors are extremely confusing if you are trying to learn this material for the first time, and very frustrating when they occur on the practice tests. Several practice test problems were impossible due to lack of information. Additionally, there are things which can appear in the SAT Physics which are not covered in this book, but generally they only show up once or twice on a test.
